# Exploitation

Exploitation means to intrude/ penetrate a system.

Examples are network exploitation, web exploitation, application exploitation, and so on.

Process of Exploitation:

Post Exploitation:

The phase just after penetration is called post exploitation.

When you have attacked any machine or intruded any machine that is called as penetration.

When you have already penetrated inside a machine then the next step is called post exploitation.

When you are trying to go inside deep of a particular operating system to gather more and more information about the victim that is called post exploitation.

For example:

System files info

Process of post Exploitation:
